EXPERIENCE

OKX Jul 2025 – Present
Software Engineer

- Developed **Dollar Cost Average (DCA)** for DEX, delivering **REST APIs** and notification components. Drove implementation updates and service integration through cross-functional collaboration, supporting **$2 million in daily volume**.
- Handled **deployment monitoring**, production troubleshooting, alert-driven fixes for **DEX Strategy** services.
- Created **Java SDK** for **Solana smart wallet**, established engineering infrastructure, designed SDK APIs and developer tutorials, led system architecture and implementation of the demo repository.
- Drove **Jito** integration and wallet migration testing for **Solana smart wallet**. Analyzed performance (compute, transaction size, and heap memory usage), optimized memory consumption by **40%**, improving system scalability and reliability.
- Integrated **AI-assisted engineering** workflows using **Claude Code**, accelerating triage and debugging of issues, feature prototyping, automated testing and scaffolding, and code iteration across backend services.
- ***Tech Stack: Java, Spring Boot, MySQL, Redis, Kafka, Rust***

HUTCHINSON RESEARCH & INNOVATION SINGAPORE Jan 2024 – Jun 2024
Full-stack Engineer Intern

- Built an internal **generative AI web application** that streamlined routine administrative workflows across 3 departments.
- Designed and implemented the system **end-to-end** across frontend, backend, and database layers.
- ***Tech Stack: Python, FastAPI (REST), PostgreSQL, Docker***

SWITCHEO LABS May 2022 – Jul 2022
Back-End Engineer Intern

- Built a **Node.js-based trading bot** to automate validation of trading engine behaviour, reducing manual testing effort.
- Contributed backend features in **Go** to **Carbon**, a layer-2 blockchain platform serving **15,000+ users globally**.
- ***Tech Stack: Go, JavaScript, Node.js, Cosmos SDK***

PROJECTS

PAYSCRIBE @ TELEGRAM – GitHub Mar 2024 – Jun 2024
Group Payment Tracker

- Built a **Telegram bot** for group expense tracking, simplifying shared-payment workflows for **100+ users**.
- Implemented the bot in **Rust** using **Teloxide** and **Redis** to support responsive, low-latency interactions.
- ***Tech Stack: Rust, Redis, Teloxide***

EDUCATION

NATIONAL UNIVERSITY OF SINGAPORE (NUS) Aug 2021 – June 2025
Bachelor of Computing in Computer Science, Honours

- Grade Point Average: 4.72 / 5.00
- Specialisations: **Parallel Computing**, **Networking and Distributed Systems, Database Systems**
- NUS Merit Scholarship
- Dean's List, AY 2021/2022

TECHNICAL SKILLS

- **Languages**: Java, Rust, Python, JavaScript, TypeScript, C, C++, Go, Bash
- **Backend**: REST APIs, Spring Boot, FastAPI, Node.js, Express.js, Microservices
- **Infrastructure**: Kafka, Redis, SQL (MySQL, PostgreSQL), MongoDB, Docker, Linux, Git
- **AI-assisted Engineering**: Workflow Automation, Test Scaffolding, Claude Code, Codex

ADDITIONAL INFORMATION

- **Leadership**: ORNS Battery Commander, leading an 80-man battery in a Singapore Armed Forces reservist artillery battalion.
- **Languages**: English (Native), Chinese (Professional)
